1 Introduction

A **(integer) partition** of a non-negative integer n is a way to write n as a sum of integers. Sums that only differ in the order of the summation are considered to be the same. A **part** is an individual summation. The number of different sums in a partition of n is the partition function, $\mathbf{p}(\mathbf{n})$. A partition π of n is indicated as $\pi \vdash \mathbf{n}$. A partion can be written as sums, a tuple, in a superscript notation or as a Young diagram (also called a Ferrers diagram).

5	(5)	5^1	
$4 + 1$	(4, 1)	$1^1 4^1$	
$3 + 2$	(3, 2)	$2^1 3^1$	
$3 + 1 + 1$	(3, 1, 1)	$1^2 3^1$	
$2 + 2 + 1$	(2, 2, 1)	$1^1 2^2$	
$2 + 1 + 1 + 1$	(2, 1, 1, 1)	$1^3 2^1$	
$1 + 1 + 1 + 1 + 1$	(1, 1, 1, 1, 1)	1^5

2 Install

```
latex partitions.ins  
bash install.sh
```

3 Usage

```
\partition{3,1,1}
```

```
\begin{tikzpicture}[x=2mm,y=2mm]
\tikzpartition{7,5,3}
\node[dotpartblue] at (d11) {};
\node[dotpartblue] at (d12) {};
\node[dotpartblue] at (d13) {};
\node[dotpartblue] at (d14) {};
\node[dotpartblue] at (d15) {};
\node[dotpartgreen] at (d21) {};
\node[dotpartgreen] at (d22) {};
\node[dotpartgreen] at (d23) {};
\end{tikzpicture}
